

## **Topic: Sudden Death, Out-of-hospital cardiac arrest (OHCA), DEA, Argentina**

### **Problem:**

- In Argentina it is possible to estimate about 40,000 cases annually. Approximately 1 case of sudden death is expected per 1000 inhabitants, but what is the official estimate of the annual number of cardiac, out-of-hospital and in-hospital arrests? **Even in 2024, there are no statistics on the geographical distribution of Out-of-Hospital Cardiac Arrest (OHCA) and sudden death events in Argentina.**
- Automatic external defibrillators (AEDs) can prevent sudden death of people. The Mandatory nature of having at least one external automatic cardioverter defibrillator (AED) is not yet guaranteed in public and private places with daily concentration or circulation of more than 1000 people/day. **Defibrillation 3 to 5 minutes into the sudden death episode can produce survival rates of up to 50 to 70%.**
- Publicly accessible AED registries, conventional drone-delivered AEDs, and crowdsourcing technologies that involve the retrieval of sparsely distributed static publicly accessible AEDs **are difficult to implement, costly, and unsustainable strategies.**

### ***Vision***

- Sudden death requires a systemic approach based on multiple levels and not based on a single intervention.
- Innovation in healthcare strategies.
- The citizen is the first agent for the response to cardiac arrest and their participation is essential in the chain of survival, more first responders, more nearby responsible and/or empathetic.

### **Data**

Regarding DEAS, organizations that collect collaboratively were identified. But sparsely distributed.

Considering OpenstreetMaps (OMS), approximately 50 AED records are identified throughout the country. For Salta it is not identified.

**survival chain**

Based on the human dimension.

Based on Chain of Survival based in Argentina and American Heart Association (AHA).

| Chain | Human                                                                        | Defined in Argentina                             | AHA                                   | What Data?                                       | Who the do they have? data available?<br>(they exist and are can access to explore) | That can do with them?<br>Data/Cs of data/ AI / technology                                | Arg | Jump |
